

DPSS Nd:YAG Micro Lasers

STA-01 series

STA-01 series Diode Pumped Nd:YAG Solid-State Micro Lasers deliver high peak powers (up to 1 MW) with sub-nanosecond pulse lengths. Different resonator configurations allow STA-01 series lasers to reach high repetition rates of up to 200 kHz or pulse energies as high as 1 mJ. The family of highly reliable pas-

sively Q-switched solid-state lasers are suitable for various applications because of their compactness and excellent beam quality.

The laser consists of laser controller and laser head. The laser can be operated from external or internal trigger mode.

APPLICATIONS

- Pump source for harmonic generators, optical parametric oscillators and amplifiers (using periodically poled KTP or LiNbO₃ crystals)
- Low-coherence “white light” interferometry
- Test and measurement systems
- Optical coherence tomography
- Two-photon microscopy
- Fluorescence microscopy
- Laser seeding
- Spectroscopy
